

Marine Data News

Marine Data News is a quarterly free electronic newsletter that delivers the latest news and information on marine data and events.

You can subscribe and access past issues free of charge here www.oceannet.org/marine_data_newsletter

www.oceannet.org

Who is involved?

- We are a genuine partnership open to all with an interest in marine data and information.
- We have over 30 partners representing the whole marine sector: from government departments through research institutions to private value adding companies.

The MEDIN Sponsors are:

MEDIN

Working together to improve access to and stewardship of marine data

What are we doing?

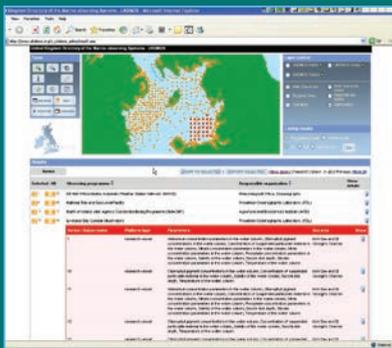

- Making it easier to source and use marine data
- Saving our partners time and resources
- Providing secure, long-term curation of our valuable marine data sets
- Working with UK Government to implement the UK Marine Monitoring and Assessment Strategy
- Supporting implementation of the Marine Act
- Helping partners to deal with international data requirements e.g. INSPIRE.

www.oceannet.org

How?

- A framework of marine data archive centres (DACs)
- A data discovery portal
- A source of standards and guidance for data and metadata – see separate standards leaflet
- Delivering data to international databases
- Workshops and forums, regular newsletters via Marine Data News
- Securing and providing base reference layers to underpin assessments and planning where possible

© MEDIN 2010

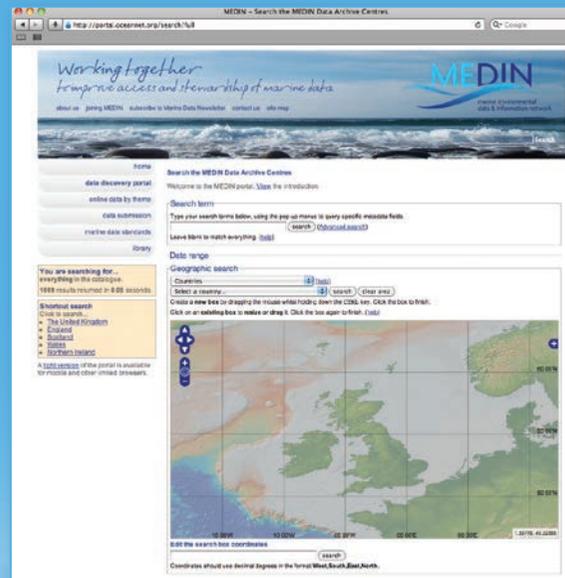

What products can we offer?

- Data Discovery Portal
- UK Directory of Marine Observing Systems (www.ukdmos.org)
- Marine reference layers
- Inventory of UK cruises
- Tide, current meter and wave data catalogues
- Transfer of data to global databases
- Advice on management of marine data
- A common standard for descriptions of data holdings
- Plus much more on our website

© Tom Reid

Data Discovery Portal

The MEDIN portal is a metadata discovery service providing users with a single point of access to a well-balanced, INSPIRE compliant, authoritative marine metadata catalogue.

portal.oceannet.org/search/full

Metadata records are available for UK marine data sets across all subject areas and disciplines. This includes UK organisations undertaking data collection in non-UK waters. There are other portals which contain data for more specific data themes or from a European rather than a UK perspective.

There are tools available on the website to easily create metadata. Please let us know if you would like to have your metadata added to the portal.

Data Submission

There are currently seven accredited MEDIN DACs:

- **British Geological Survey (BGS)** for seabed and sub-seabed geology, geophysics data
- **British Oceanographic Data Centre (BODC)** for water column oceanographic data
- **The Archive for Marine Species and Habitats Data (DASSH)** for marine species and habitats data
- **UK Hydrographic Office (UKHO)** for bathymetry data
- **The Met Office** for marine meteorological (metocean) data
- **FishDac** for marine fisheries data: Centre for Environment, Fisheries & Aquaculture Sciences (CEFAS) & Marine Scotland Science (MSS)
- **HistoricDAC for marine historic environment data:** Archaeology Data Service (ADS) & Historic Environment Scotland (HES)

MEDIN contract clause for data

MEDIN recommendations for a standard data collection clause to be used in contracts can be downloaded at www.oceannet.org/data_submission. This clause can be used by organisations contracting research, monitoring and impact assessments to ensure data is submitted to DACs and therefore made available for reuse at the end of a contractual agreement.
