

DASSH/BGS Geological Data Small Project - November 2015

Introduction

The aim of the MEDIN small project was to pilot the transfer and archiving of geological data held in the Species and Habitats DAC at DASSH into the BGS Geology DAC.

DASSH carried out a review of their holdings to determine which datasets contained geological data and 2 examples were initially provided to BGS for assessment of suitability.

- 31 surveys found (excluding MCZ surveys which are already held at the BGS DAC)
 - 30 contain geological data
 - 1 contains geochemical data

DASSH will forward the data to BGS.
