Dear Mrs. Mayle,

Herewith I send you the forms for permission for our research vessel TRIDENS for research activities in waters governed by the jurisdiction of England.

It will be for the period of 29-06-2009 tot 24-07-2009 (wk. 27-30).

With kind regards,

Mw. E. Hoeboer

NOTIFICATION OF PROPOSED RESEARCH CRUISE

PART B : GENERAL

1. NAME OF RESEARCH SHIP: **TRIDENS** CRUISE NO: wk. 27-30/09

2. DATES OF CRUISE FROM **29-06-2009** TO **24-07-2009**

3. a) PURPOSE OF RESEARCH *To carry out an hydro acoustic survey defining the abundance of herring and sprat in the North Sea, in co-operation with the institutes of Norway, Scotland, Denmark and Germany. Calibration of the echosounder in a sheltered area, preferably at Scapa Flow, Orkneys 58°56'71 N - 003°00'57 W, Stavanger fjord 59°05N - 005°36 (second choice) or Kristiansand harbour 58°08N - 007°59E (third choice).*

b) GENERAL OPERATIONAL METHODS (including full description of any fishing geartrawl type, mesh size etc:)
A pelagic trawl (2000 meshes), fitted out with an inner codend of 20 mm meshes, will be used for identifying the traces.

For the calibration the ship has to be anchored in a sheltered location, and the 38 kHz transducer will be calibrated with the aid of a small copper sphere that is lowered below the keel of the ship. For the calibration of a second 38 kHz- and a 200 kHz transducer which is build in a towed body, the towed body (2,5 x 1 m; 300 kg; stainless steel) has be lowered a few meters below the surface. The entire operation will take approximately 8 hours. A CTD profile will be taken at the calibration site. No fishing will be conducted, and no other electronic instruments than echosounder with the normal 38 kHz and 200 kHz transducer and the CTD will be operated.

4. ATTACH CHART showing (on an appropriate scale) the geographical area of the intended work, positions od intended stations, tracks of survey lines, positions of moored/seabed equipment, areas to be fished: **Chart included.**

5. a) TYPES OF SAMPLES REQUIRED eg Geological/Water/Plankton/Fish/Radionuclide:

Samples of pelagic fishes for biological research will be retained on board. CTD profiles.

b) METHODS OF OBTAINING SAMPLES (eg dredging/coring/drilling/fishing etc)
(When using fishing gear indicate fish stocks being worked, quantity of each species require, quantity of fish to be retained on board)

*Samples of pelagic fishes will be collected by fishing
CTD profiles will be taken by lowering a CTD probe as deep as the bottom.*

6. DETAILS OF MOORED EQUIPMENT: **none**

7. ANY HAZERDOUS MATERIAL: (Chemicals/Explosives/Gases/Raioactive etc)

(Use separate sheet if necessary) **none**

a) TYPE AND TRADE NAME

b) CHEMICAL CONTENT (& Formula)

c) IMO IMDG CODE Reference & UN Number

d) QUANTITY & METHOD OF STOWAGE ON BOARD

e) IF EXPLOSIVES give date(s) of detonation

- Method of detonation

- Position of detonation

- Frequency of detonation

- Depth of detonation

- Size of explosive charge in Kgs

10. STATE:

- a) WHETHER VISITS TO THE SHIP IN PORT BY SCIENTISTS OF THE COASTAL STATE CONCERNED WILL BE ACCEPTABLE

YES

- b) PARTICIPATION OF AN OBSERVER FROM THE COASTAL STATE FOR ANY PART OF THE CRUISE TOGETHER WITH THE DATES AND THE PORTS FOR EMBARKATION/DISEMBARKATION

- c) WHEN RESEARCH DATA FROM THE INTENDED CRUISE IS LIKELY TO BE MADE AVAILABLE TO THE COASTAL STATE AND BY WHAT MEANS

Cruise report within two months after the survey.

Calibration of SIMRAD EK-60 echo sounder on board RV "Tridens"

In June/July 2009 the RV Tridens will participate in the annual international herring echo survey in the North Sea. During this survey, the transducers of the SIMRAD EK-60 has to be calibrated, in order to make sure that the results of Tridens are comparable to those of other research vessels.

Calibration of this equipment, according to the manufacturer, has to take place in a sheltered area without currents, with water of about the same temperature and salinity as the water in the survey area, and a minimum depth of about 25 meters.

The calibration of the Tridens acoustic system is scheduled in week 27 (29 June -3 July 2009) near Scapa Flow, Orkneys, Scotland. However, the procedure may have to be conducted at another site, preferably in Stavanger fjord, Norway another time during the survey depending on weather conditions.

The ship has to be anchored in a sheltered location, and the hull-mounted 38 kHz transducer will be calibrated with the aid of a small copper sphere that is lowered below the keel of the ship. For the calibration of a second 38 kHz transducer and a 200 kHz transducer which are build in a towed body, the towed body (2,5 x 1 m; 300 kg; stainless steel) has be lowered at the site a few meters below the surface. The entire operation will take approximately 6 hours. A CTD profile will be taken at the calibration site. No fishing will be conducted, and no other electronic instruments than the echosounder with the normal 38 KHz and 200 kHz transducers and the CTD will be operated.
